

A scatter plot showing the relationship between the number of individuals (N) on the x-axis and the number of species (S) on the y-axis. The x-axis ranges from 0 to 200, and the y-axis ranges from 0 to 100. The data points are blue circles. There is a dense cluster of points at low N (below 50) and low S (below 20). A few points are scattered at higher N and S values, including one point at approximately (170, 80) and another at (190, 20). The overall trend is positive, indicating that as the number of individuals increases, the number of species also tends to increase.
